

<b>Your details</b>	
First Name:	Geoff
Last Name:	Corbett
Do you wish to speak in support of your submission at the hearing?:	No
If yes, do you wish to support your submission in person or virtually?:	
<b>Draft Waste Management &amp; Minimisation Plan</b>	
We are proposing to introduce household kerbside food waste collection. Other districts have done so at a cost of about \$50 per household per year. Would you support a kerbside food waste collection service being implemented?:	
Why?:	
Do you agree with the key issues in the draft Plan? If so, which issues do you agree or disagree with?:	
Why?:	
Do you agree with the proposed actions in the draft Plan? If so, which actions do you agree or disagree with?:	
Why?:	
Do you have any other comments?:	If the council collects all this green waste e.g. vegetable scrapes, does this include meat products, lawn clippings, and garden clippings or waste? What is the council going to do with the waste that it collects and where are they going to put it. Is the green waste going to be put through a digester to create fuel(gas) which could be used to generate power (electricity) and return the power to the community or the fuel could be used to run the local rubbish truck as fuel(gas) or use the power to charge the batteries for the truck. I think the local council and government need to be more concerned about the plastic waste because so much of the plastic is not recyclable and that plastic could be turned back into fuel e.g. diesel rather than to landfill and eliminating the numerous excuses of the recycling companies saying they cant recycle theses products because they are the incorrect numbers. here again there is various videos converting plastics into a diesel fuel I'm not sure of the economics of this but has anybody looked into this as a possible option. I

know red tape and bureaucracy will be what kills these good ideas. I look forward to hearing from any councilor or council staff regarding this submission.
